

CG – PHARMA SOLUTIONS

CG connects: Cleanroom and chemistry

YOUR CHALLENGE – OUR SOLUTION

The CG journey

Your challenges. Our solutions.

Customer wishes are the start of a journey that doesn't end until the wish is fulfilled.

We understand our customers' requirements and instructions and are committed to delivering the precise solution to their challenges at every stage of the process.

PROCUREMENT

We benefit from our experience in the chemical trade dating back to the 1960s. Our globally oriented purchasing ensures the availability of pharmaceutical packaging materials, excipients and active substances from reliable sources. Production in the CG cleanroom is based on reliable and safe access to raw materials of the highest quality thanks to a supply chain that has worked successfully for many decades.

PROCUREMENT

- Long-term supplier partnerships
- Highly developed supplier network
- Enhanced supplier qualification system
- Assured access to high-quality raw materials
- Standard portfolio >500 excipients, APIs

QUALITY CONTROL

Our quality control already includes all tests on raw materials, finished products and packaging in accordance with current pharmacopoeias.

In order to be able to act even more flexibly and quickly, a 5-storey laboratory complex is currently being built on our premises. This investment enables us to carry out microbiological and molecular-biological tests as well as extensive pharmacopoeia analyses in-house.

There are no compromises when it comes to quality, which is why we have already positioned ourselves today for the future.

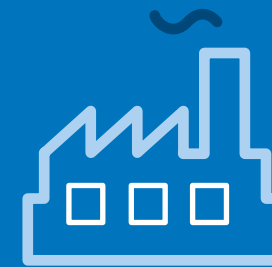

PRODUCTION

In our production facilities under cleanroom conditions (class C and D), we rely on the perfect interaction of technology and people. The production of pharmaceutical media requires technical facilities that satisfy the highest standards. Depending on the medium to be produced, batch sizes of up to 5,000 litres can be produced in stainless steel or PVDF batch boilers.

Validated manufacturing processes ensure homogeneous and reproducible quality for every single batch produced.

PRODUCTION

- Production according to GMP/AMG§13
- Cleanroom environment C/D (ISO 7/8)
- In-house Purified Water (AP)/Water for Injection (Wfi) production
- Hazardous materials in cleanroom environment
- Blending, processing and repacking of liquid and solid materials
- Vessel capacity of 5,000 L per batch (stainless steel / PVDF)
- Production of standard and customised buffers for upstream and downstream applications
- Various packaging types and volumes:
From 1 L single-use bag up to 20,000 L isotainer

QUALITY CONTROL

- Service portfolio – EXTRACT
- Multicompendial physical and chemical testing
- Finished product testing according to customer requirements
- Microbiological testing
- Elemental impurity testing (ICP)
- Stability testing according to ICH guidelines

WAREHOUSE

Our modern warehouse for pharmaceutical raw materials and products meets all the requirements of our commitment to quality.

The qualified GMP warehouse is directly connected to the production area via an automatic transport system. This enables us to guarantee consistently controlled environmental conditions for our products.

3,200 pallet bays, a 30 cubic metre underground tank for liquid media and our own filling station for tankers enable us to deliver just-in-time to our customers.

WAREHOUSE

- GMP-qualified
- Temperature and humidity monitoring
- Built-in laminar flow cabin for sampling of incoming goods
- >3,000 pallet slots directly connected to cleanroom area

DISTRIBUTION

- GDP transport with company fleet
- Contracts with forwarding agents
- Worldwide overseas shipments
- Strong global distribution network with partner companies

DISTRIBUTION

We have been working for many years with approved forwarding agents and distribution partners for the international distribution of goods, whether on land, by rail, ship or air freight.

When it comes to regional tasks, we excel with the highest possible flexibility and just-in-time delivery with our own vehicle fleet. Our customers are supplied 365 days a year - reliably, punctually and in high quality - from the smallest container to tankers.

CG – Individual solutions. Highest quality.

Quality is our tradition, because we are firmly rooted in the chemical trade and are committed to the values that have made us successful in this sector: reliability, precision, customer orientation. At the same time, quality also shapes our future.

We understand that quality is a big promise to keep. And we are ready to deliver on this promise again and again for our customers and business partners. Which is why you can count on us to provide you with personal support and will quickly realise that we consistently focus our strengths on meeting your goals and requirements. In short: You will get to know us as a pharmaceutical manufacturer who works on your behalf to find the right solution without making any compromises.

After all, CG stands for connection. And the most important one is between you and us. That's why we supply what your business needs. In precisely the quantities - from small container to tanker - and the qualities you require.

CG – a strong partner for the pharmaceutical industry

Our cleanroom production is oriented towards the pharmaceutical needs of tomorrow. We offer individual solutions for the pharmaceutical, biotech and medical device industries. We are able to process hazardous substances under cleanroom conditions. The results are organic and inorganic media, including buffers for upstream and downstream processes, which can be supplied in sterile single-use bags, canisters, drums, IBCs and tankers up to 20,000 litres.

We develop flexible and customised processes as a matter of course – always with the ultimate aim of precisely satisfying the customer's specific requirements. Rigorous analyses and tests carried out in our own laboratories mean that we can reliably guarantee the quality of the production process.

This commitment to quality is underlined by a number of different certifications: § 13 AMG, GMP, GDP, ISO 9001, 14001, Responsible Care

IF FURTHER INFORMATION DESIRED - WE ARE THERE FOR YOU !

Dr. Stephan Maier

Head of Pharma Cleanroom
Qualified Person (AMG)

TEL +49 (0) 511 / 87803 – 219
MOBILE +49 (0) 172 7843468
MAIL Stephan.Maier@cg-chemikalien.de

Marco Regel

Business Development Manager
Pharma Cleanroom

TEL +49 (0) 511 / 87803 – 146
